DynamicPDF PrintManager is a powerful Application Programming Interface (API) that can simplify the work of developers by allowing them to integrate PDF printing capabilities to their.NET applications. Programmers can benefit from this tool's functions by automating PDF printing directly from their host.NET application (be it developed with C# or VB.NET). This process implies outputting any PDF file directly to a supported printing device, thus improving overall efficiency. After implementing the printing support, it is possible that users can rely on a wide variety of printing-related functions directly from within the application, without relying on other software components. These features include multiple print job management, adjusting printer settings and event handling. Additionally, DynamicPDF PrintManager for.NET allows developers to integrate various other functions, aside from the ones described above. Users can print single or several PDFs to any supported printer by including them in the same job. The printing jobs statuses can be monitored directly from within the host application, as this tool features support for this function. More so, it also packs event management abilities for every possible scenario, be it a success or a failure. Therefore, users are provided with a high overall accessibility and efficient control over the process. For further customization, it offers support for other useful print-related configuration settings. Thus, users are allowed to specify the number of copies, define the orientation and the paper size, adjust the resolution, scaling and alignment parameters. The aforementioned values can be modified directly from the desired.NET application, as well.
